DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 9 and 10 are rejected under 35 U.S.C. 102(b) as being anticipated by Hoshino.

Hoshino discloses the use of an adjustor for attaching a string to the bridge of a stringed instrument, with a base plate (see figure 7b) that contacts the body of the instrument, said adjustor comprising: an anvil(21), a saddle(S1) pivotally supported by the anvil and defining a string groove (32) adapted to receive the string and means for adjusting (see figure 7b) the relative angle of the anvil and said saddle about said fulcrum, whereby the distance from said string groove to said anvil is varied, and plural length adjusting screw(34) connected to the base plate, whereby rotation moves adjusters towards or away from the base plate to adjust the length of the strings.

Allowable Subject Matter

3. Claims 1-8 allowed.

4. Claims 11-14 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

5. Applicant's arguments filed 9/7/02 have been fully considered but they are not persuasive. Hoshino clearly discloses the use of a adjustor for attaching a string to the bridge of a stringed instrument, with a base plate (see figure 7b) that contacts the body of the instrument, said adjustor comprising: an anvil(21), a saddle(S1) pivotally supported by the anvil and defining a string groove (32) adapted to receive the string and means for adjusting (see figure 7b) the relative angle of the anvil and said saddle about said fulcrum, whereby the distance from said string groove to said anvil is varied, and plural length adjusting screw(34) connected to the base plate, whereby rotation moves adjusters towards or away from the base plate to adjust the length of the strings. The saddle is referenced as (S1) and the anvil is element (21).
